AED MAP

aedmapa.pl

An app with a map of AED defibrillators

AED Map helps you find the nearest AED defibrillator in your area.

What is an AED defibrillator?

An AED is a defibrillator that delivers an electric shock during sudden cardiac arrest and restores a normal heart rhythm. It analyses the rhythm itself and guides you step by step by voice.

5% → 70%

This is how the chance of survival rises when defibrillation happens within the first minutes.

When someone is not breathing

1. Call 112.
2. Until the AED arrives, keep doing chest compressions.
3. Once the AED is switched on, follow its voice instructions.

Scan the code or go to **aedmapa.pl** and download the app from Google Play or the App Store.

112 The app does not replace an emergency call.
